Welcome to the Israel Pavilion ■ Hall 5 at Milipol Paris 2013

Israeli HLS technologies, developed to safeguard Israel's national security, are among the most advanced in the world and have been proven in many real-life situations. They are the solutions of choice for many nations that are increasing their investment in homeland security.

Cities, with high population densities and their concentrations of strategic assets, are a special focus of many security agencies. Israeli systems support the extensive efforts being made to secure modern cities by integrating existing surveillance capabilities with sophisticated situational awareness mechanisms and the command and control centers that empower "safe city" initiatives. Israeli companies have particular strengths in intelligence gathering and analysis (data fusing) that help secure the smart city. These systems are typically integrated with existing law enforcement, traffic management, and general security procedures in urban domains. Ensuring business and organizational continuity requires preparing for emergencies. This includes emergency management procedures, robust communications systems and more, all available from Israeli providers. Physical threats can be minimized and even neutralized via Israeli armored vehicles and related hardware, including non-lethal and less-lethal systems.

Battery pack to riot dispersal vehicle, personnel protection to signal intelligence, there's an Israeli solution that meets your needs.
