Inspired by innovation
at CMEF
May 14-17, 2019
Shanghai, China
National Exhibition & Convention Center
Israel Pavilion, Hall 5.1 | Stand F13
DIVERSITY is the backbone of Israel’s Medical Device & HealthCare IT Industry

Diverse Companies • Diverse Technological Implementation • Diverse Medical Applications.

By the end of the 1990s, Israel was home to more than 200 life science companies. With steady growth over the last decade (some 40 new companies formed each year), Israel has introduced creativity and innovation into the field; today there are over 1,500 active companies.

In a relatively short period of time, an impressive 40 percent of these companies are already generating revenues. Israel’s entrepreneurial ecosystem creates opportunities for start-ups to become advanced, commercially viable and promising businesses. As proof of the industry’s development, 2018 Medical Device & Digital Health have passed $2 billion, growing steadily since 2010; while a rich pipeline of seed companies promises to perpetuate current growth.

The Largest Sectors is Medical Devices and Digital Health (over 65 percent of companies). In the medical device arena, Israeli scientists and engineers have integrated advanced technologies in electronics, communications and electro-optics to develop world-class innovations in Digital Imaging, Medical Lasers, Telemedicine, Early Diagnostics, Smart Surgical Equipment and more. Over 600 medical device exporters engaged in a variety of medical application such as Cardiovascular and Peripheral Vascular, Neurology and Degenerative Diseases, Preparedness and Emergency Medicine, Intensive Care, Orthopedics and Sport Medicine, Gastrointestinal, Infection Control, Ophthalmology, Pain and Wound Management, Oral and Dental Care, Dermatology and Aesthetics...

The digital era opens tremendous opportunities to deliver healthcare services to patients at the comfort of their homes or wherever they are, through any web or mobile device, without requiring a presence of healthcare provider in the loop. For millions of people that live in distance from or in scarcity of healthcare resources and services, the growing spread of smartphones creates new possibilities to improve healthcare services access and quality of life. Telemedicine, mHealth, Wearables, Remote Monitoring, Electronic Medical Records, Big Data Analytics, Internet of Medical Things, Medical Apps and others all can be incorporate into Digital Health or Health Information Technologies.

Israeli Digital Health industry has its roots in a long history of using innovative communication technologies to improve healthcare delivery. With more than 25 years of expertise in implementing health IT, electronic medical records and Big Data Analytics; today, our Government keeps investing strongly in IT thus putting Israeli expertise in international demand.

We are proud of the contributions of our gifted innovators at Israeli Medical Industry, which is a truly rewarding combination between Life Sciences and High-end Technologies starting from the design, development, advanced manufacturing integrating innovative materials, systems and technics promoting efficient work of the medical staff, allowing to achieve maximum accuracy in testing and treatment tailored to each patient’s unique profile placing the individual in the center.
Inspired by Innovation, Connected and Coordinated...

The Israel Export and International Cooperation Institute, supported by member firms, private sector bodies and the government of Israel, advances business relationships between Israeli exporters and overseas businesses and organizations. By providing a wide range of export-oriented services to Israeli companies and complementary services to the international business community, the Institute helps build successful joint ventures, strategic alliances and trade partnerships.

The IEICI’s Medical Device & Digital Health Sector is part of the Life Science Department which is the leader in business matching between the more than 1,500 companies in the Israeli life science industry and worldwide business partners at all levels. It has a proven ability to identify and match suitable potential business partners, organize one-on-one business meetings, and is a focal point for contacts with the government as well as with industry.

The Israeli Medical Device & Digital Health Sector has more than 1,000 companies targeting various fields of medicine: Cardiology, Oncology, Neurology, Emergency Medicine, Rehabilitation, Ophthalmology, Gastrointestinal, Orthopedics and Sport Medicine, Women’s Health, Pain and Wound Management, Dermatology and Aesthetics. Offers a variety of innovative medical solutions and technologies that answer today’s healthcare challenges. The IEICI is the major organizer of Israeli companies’ participation at CMEF 2019.

Israeli Economic and Trade Missions to China

Israel is well known for its innovation and creativity with thousands of startup companies in various technological sectors, including the medical devices industry. The medical device sector in Israel has been growing steadily with nearly 1200 medical device today; Israel is a leading country with the highest ration of medical device patents per capita; the investment ecosystem is well developed, and the venture capital investments are on the rise in both the size and amount of the deals.

In order To increase exposer to this growing pool of innovation, Israel’s Ministry of Economy and Industry has 5 Trade offices in China, located in: Beijing, Shanghai, Guangzhou, Chengdu and Hong-Kong. Their main goal is to assist and introduce Chinese and Israeli companies to each other and create business opportunities and long–lasting commercial relationships. The teams are dedicated to accompany and support Israeli exporters in their activities in China, promote investments in Israel and stimulate strategic cooperation between partners from both countries.

We invite Chinese companies and entities seeking Israeli technologies, investment opportunities and R&D collaborations to contact us. We can also assist in identifying adequate solutions and partners in Israel, in connecting with potential collaborators, and as cases may be, help during your visit to Israel.

For further information, please visit our web–site: www.ittrade.gov.il/china/ or contact us directly:

Alpha Omega

Categories: Medical Equipment • Monitoring • Minimally Invasive System (MIS) • Disposables
Therapeutic Area(s): Neurology & Degenerative Disease • Neuroscience

Innovative solutions for optimal lead placement during DBS

Alpha Omega (AO) is an international medical device company with Headquarters in Israel and subsidiaries in USA, Germany and Guangzhou. AO is offering innovative solutions for Neurosurgery and Neuroscience research.

In Neurosurgery, AO is offering leading-edge solutions for enhancing and simplifying the Deep Brain Stimulation “DBS” therapy by implementing sophisticated software and hardware for brain mapping and navigation to allow increased treatment productivity of Neurological and Psychiatric disorders, awake or asleep, resulting in better patient outcomes.

In Neuroscience, AO is offering variety of solutions for brain-related research including Neural recording & stimulation tools, micro manipulators, electrodes and other accessories for non-human subjects in universities and research institutes

The company’s equipment can be found in hundreds of hospitals and research institutions around the world.

GA Medtec is the Chinese subsidiary of Alpha Omega and it’s the only company in China offering Microelectrode recording navigation for Deep Brain Stimulation and the most innovative company in Neuroscience research. GA Medtec is looking for Distributors and Sub-dealers in the field of Functional Neurosurgery and Neuroscience.
Automated scanning system for detection of Circulating Tumor Cells

Identification and characterization of Circulating tumor cells (CTC) in peripheral blood has been the basis for development and utilization of “Liquid Biopsy” tests, aimed to screen, monitor and assess the status of cancer patients during different phases of disease and treatment.

For nearly two decades, BioView has been developing, manufacturing and marketing innovative automated cell-imaging and analysis solutions for use in cytology, cytogenetic, pathology, clinical and research laboratories.

Founded and managed by experts in the areas of medical devices, and automated scanning systems, BioView leveraged its knowledge and expertise in the development of a dedicated scanner, designed to address the specific challenges of Circulating Tumor Cells imaging, detection, analysis and reporting.

The result is the breakthrough DeNovo – an all-in-one benchtop scanner that incorporates cutting-edge technology which enables highly-accurate automation and standardization of Circulating Tumor Cells (CTC) imaging, detection and characterization. The DeNovo is easy to operate and integrate with any circulating tumor assay, as well as any combination of immunofluorescence and FISH markers.

The DeNovo system is the first all-in-one scanner exclusively designed to facilitate and automate the imaging, detection and characterization of CTCs. DeNovo greatly enhances liquid biopsies tests, facilitating their introduction into the clinical routine.
An innovative and dynamic dental implants manufacturer

Cortex Dental Implants Industries Ltd. is a leading player in the dental implants systems market. The company is operated and managed by highly qualified leading experts and professionals in the field of maxillofacial surgery, prosthodontists, and periodontists. The company manufactures high-end prosthetic dental products, dental implants, and dental surgical kits and instruments.

Being a reliable and reputable dental implant manufacturer, whose high-quality products are backed by innovative in-house R&D, modern production facility, and strict quality assurance control. Cortex prides itself with an impressive line-up of patent pending innovations such as the Anti-Rotational Locking Element designed to increase implant stability, the Premium Implant set offering smart sterile packaging allowing any implant process strategy (1-stage/2-stage/Immediate).

We offer high quality, reliable and easy-to-use products and services including:

- Uniquely designed implants to provide ideal primary stability in various clinical situations, in all types of bones -- e.g. Dynamix, Classix, Conical, Saturn, Magix system

- Variable prosthetics solutions, multi-unit abutment

- All kinds of surgical tools and surgical kits for hex and conical platforms

- Top quality CAD/CAM products range and Guided Surgery System

Our products have CE, and CFDA approval and we sell in China more than 5 years
Analytics and Sensing Solutions for improved patient safety

EarlySense’s continuous monitoring solution is used in hospitals, nursing homes and health facilities around the world to assist with early detection of patient deterioration and empower health teams to help prevent adverse events. EarlySense’s medically-proven, FDA-cleared solution leverages Artificial Intelligence (AI) and big data analytics to elevate patient care by providing actionable health insights and improving clinical outcomes.

Placed under a bed mattress, EarlySense’s patented sensor accurately and continuously monitors heart rate, respiratory rate and movement. This enables clinical staff to quickly identify patient deterioration and prevent potential adverse events such as falls, decubitus (pressure ulcers) and help support the early detection of sepsis.

EarlySense’s technology is available in a compact OEM module that allows companies and developers to integrate and expand its use in their own products and services. The integration supports any combination of the main EarlySense modules - respiratory rate, heart rate, prevention of pressure ulcer/ wound management, prevention of patient falls and sleep analysis.

EarlySense also offers its proprietary sensors to select partners for home use (remote-monitoring) with API/SDK integration.

The company has partnered with leading global technology companies including Hill–Rom, Philips, Welch Allyn, and Lachesis.

EarlySense is based in Ramat Gan, Israel and Woburn, Massachusetts.
Elcam Medical

www.elcam-medical.com

Categories: Accessories • Disposables • Drug delivery • Monitoring
Therapeutic Area(s): Cardiovascular • Enteral Feeding Line • Infection Control • Intensive Care Unit (ICU)

World leading OEM producer of disposable medical devices

Elcam Medical is a world class producer of disposable medical devices and components for OEM markets, and innovative solution provider for specialized flow control needs. Elcam works with the medical industry’s leading companies, improving medical fluid management safety and effectiveness in acute settings, such as IV therapy, vital signs monitoring, interventional cardiology & radiology and dialysis. (44)

As a worldwide leader of fundamental elements in fluid management systems such as stopcocks and manifolds in the OEM markets, Elcam offers a vast range of standard products and maximizes efforts to provide customized solutions to our customers’ needs.

Amongst our innovative products:

**Marvelous™ (MRVLS) stopcock**
Specially designed to increase safety and save precious time so essential in critical care. Its normally closed Luer activated, swabable sampling port and the inner channel that assures continuous flushing of the internal valve volume, enable safe and efficient IV administration and blood sampling.

**Sense–IT™ Transducer (DIPT)**
The first and only fully integrated pressure transducer. This integration improves safety and reliability by providing robustness no other transducer can provide, along with space saving and ease of use.

**SafeT™ product line**
Tritan™ integrated SafeT Stopcocks and Connectors provide safer treatment through enhanced lipid and chemical resistance.
A Revolutionary Tool for Measuring Cognition and Brain Function

elminda – an innovative neuro-technology company developed the BNA (Brain Network Activation) technology specifically designed to provide a direct measure of the electrophysiological activity that underlies brain function. The revolutionary BNA testing enables physicians and individuals to measure and monitor unique brain functions like sensory-processing, attention and memory, and inspires brain health lifestyle, all through a quick, simple and non-invasive test that can be provided by any health checkup center.

In order to provide the optimum brain assessment for every person, at any age, we have constructed the world’s largest growing data base of brain recordings that span adolescent to healthy aging adults (14–85) as well as a growing number of known pathologies such as Alzheimer, Depression, and Mild Cognitive impairment as well as concussed individuals.

Incorporating machine-learning and advanced algorithms, BNA testing can compare a person’s test results to their previous healthy state baseline or to a reference of their age group generated from our extensive database of normal and clinical populations, and provide superior cognitive assessments allowing higher accuracy and deeper insights, paving the way to personalized brain healthcare.

elminda was founded in 2006 holds 60 patents is FDA and CE cleared commercially operational in the USA Israel Europe Hong Kong and China with offices in Herzliya, Israel and Chicago, USA.
BreathID®: H.pylori detection has never been easier

Exalenz Bioscience Ltd. develops and commercializes advanced systems that extract vital information for diagnostics from subtle changes in the patient’s exhaled breath based on its BreathID® technology platform.

The BreathID® Hp Lab Systems are the most innovative 13C Urea Breath Test (UBT) for diagnosing and post-treatment monitoring of H. pylori infection. The test is non-radioactive and completely safe.

The new BreathID® Hp Lab System, a state-of-the-art laboratory system for the management of multiple H. pylori detection tests, combines the unprecedented BreathID® clinical accuracy with intuitive workflow automation, to provide laboratories an efficient, economic and comprehensive solution for H. pylori detection.

The Exalenz BreathID® Hp Lab System streamlines and automates the detection process, making it simple for a technician to scan each sample, load the Auto Sampler and run up to 10 tests at once. With each batch running for approximately 20 minutes, lab technicians are free to “Press and Walk Away” to perform other tasks while the system runs automatically.

The intuitive and efficient BreathID® Hp Lab System automates many of the traditionally manual tasks required in data input and batch analysis to reduce human error and simplify reporting. It also features a secure, seamless Systems Integration, whereby data and reports can be printed or shared with Laboratory Information Management Systems (LIMS).
Flight Medical Markets Life Support Respiratory Ventilators

Established in 1996, Flight Medical is a part of publicly traded Ilex group (TLV:ILX).

Flight Medical is vertically integrated medical device company specializes in the development, manufacturing and marketing of high-end versatile ventilators.

For the last 20 years Flight Medical acquired unique experience in mechanical ventilation working with customers all over the world. Well-known portable ventilator HT50* sold and supported by Newport (Covidien/Medtronic) was developed and manufactured using Flight Medical technology.

Today, Flight Medical operates in 50 countries and won its reputation as truly reliable partner in ventilation.

In recent years, over 20,000 ventilators were deployed worldwide for use in ICU, Step down units, Emergency Room, Transport environment (ambulance, helicopters, airplane, etc. FAA approved), Homercare and Long term institutes.

Flight 60 is a Turbine-based mechanical ventilator designed to address the growing need for ventilation in hospital, long term care, emergency, in-hospital transport, home care and sub-acute. The Flight 60 ventilator is cost effective and offers outstanding clinical performance in a compact and lightweight design. Our ventilators offer advanced ventilation modes, advanced monitoring, easy to use, have invasive and non-invasive capabilities, and unique double battery concept with a total of up to 8-hours battery life.
Hospitech Respiration Integrated Adaptive Airway Management Solution

The Need

Prolonged mechanical ventilation may cause significant complications. Among these, injury to the trachea due to over inflation of the Airway cuff and Ventilator-Associated-Pneumonia (VAP) due to under inflation of the cuff, allowing aspiration of subglottic secretions to the lungs. These complications significantly increase the length and cost of hospitalization.

The Solution

Hospitech has developed a platform of solutions for airway management to reduce these complications.

The AnapnoGuard system is an automated, control unit. It’s the only available integrated, multi-function system, which combines two critical functions:

• Providing closed loop control of tracheal sealing and optimizing the cuff pressure, based on detection of CO2 leaks in the subglottic space, above the tube cuff, to achieve sealing at minimal pressure.

• Providing the most effective, simultaneous rinsing and evacuation of Subglottic Secretions, to avoid leakage of secretions to the lungs.

The system consists of a digital control unit AnapnoGuard 100s, a multi lumen proprietary endotracheal tube (AG ETT) and a disposable proprietary Connection Kit (AG Connection Kit).

In addition, the company developed the AG MASS, disposable device for manual suction of subglottic secretion, and the AG CUFFILL, the most easy to use, digital manometer for cuff pressure management.
Making China a Global Leader in Healthcare Services

IMA was established in order to provide international medical training and education to Chinese health professionals. IMA aspires to bring International standards of care to the people of China in their local healthcare facilities by working hand-in-hand with leading worldwide Institutions and Israel’s leading hospitals to share their experience and knowledge. IMA is based on three main pillars: Short Term training– several days of intensive training by Israeli experts in China. Mid-Term Training– between 1–12 months of training in Israel’s leading Hospitals observing and hands-on training. Long-Term Training – 3–5 Years of ongoing training by Israeli experts in China’s Hospitals providing a wide range of programs in management, new protocols and new technology.

The impact of the IMA Training Programs will be both immediate and significant, paving the way for millions of patients to enjoy advanced, efficient care in a safe, healthy environment in China.
Incisionless Brain Surgery Using MR-Guided Focused Ultrasound

INSIGHTEC, founded in 1999, develops and distributes the Exablate platform which provides non-invasive treatments for a variety of neurosurgery, oncology and gynecology indications. The Exablate platform uses revolutionary MRgFUS technology which combines high intensity focused ultrasound guided by Magnetic Resonance Imaging (MRI). Focused ultrasound waves, guided by magnetic resonance imaging are used to safely ablate targeted tissue, ensuring a high rate of effectiveness with minimal side effects. INSIGHTEC is continuously investing and expanding its current and investigational applications, ranging from functional neurosurgery to oncology and gynecology. With over 14,000 Exablate treatments to date, MRgFUS technology is embraced by world renowned physicians in more than 120 medical facilities. The company has received numerous innovation awards – among them are The Prix Galien, The Wall Street Journal and TIME magazine. INSIGHTEC is privately held by GE Healthcare, Elbit Imaging, York Capital Management, GEC Hengtong Investment Limited Partnership and MediTech Advisors.
Development of products to improve insulin injection therapy

Insuline medical is developing technologies and products to improve and manage subcutaneous drug delivery. The company has developed the EyePen system, a complete diabetes management system for patients on insulin injection therapy. The system includes the EyePen device, a unique add-on to insulin injection pens that reliably tracks dosing activity and transmit the information to a smartphone diabetes management application. The app collects insulin data along with other essential data for diabetes management and provides information and alerts to the user. Data is also transmitted to the cloud for further analysis and feedback. The EyePen system is a unique diabetes management system which provide a highly reliable insulin dosing data essential for reliable diabetes management for patients on insulin injection therapy.

The company also offers the InsuPad® product intended to improve efficacy of insulin injection therapy. InsuPad® enables patients on intensive insulin therapy to take control of their disease and reach treatment targets in more efficient way. By treating the skin at the injection site, it increases blood flow helping the body absorb insulin better and faster. The result: more predictable insulin therapy, less hypoglycemia and hyperglycemia events.
Simple Solutions for Complex Problems

IVT Medical is a medical device company specializing in research, design and development of novel wound healing technologies.

IVT Medical developed the TopClosure® Tension Relief System, an innovative-ingenious technology intended for management of simple and complex wounds for civil, military and mass-casualty injuries applications.

TopClosure® may serve as an essential device for dynamic, acute and chronic wound closure and secure, given its wide distribution of stress to the skin and away from the wound edges, tension on the scar can be substantially reduced, thus enabling closure of hard-to-close wounds and improving the aesthetics of scars.

IVT Medical Ltd. has developed the Vcare α®, a cutting-edge non-pharmaceutical wound healing device, applying regulated oxygen-enriched and irrigation negative pressure-assisted wound treatment for enhancing healing of complex, hard-to-heal wounds.

Its purpose is to minimize the risk of bleeding, while focusing on patient’s specific clinical needs. For better detection and bleeding control, the Vcare α®, is equipped with specially designed user-friendly software, electronics and alarms.

When applied simultaneously, the TopClosure® and the Vcare α®, provide new concept of wound management that changes perceptions of wound closure in wide range of surgical applications, instituting new standards of care for optimizing wound healing with substantial global significance.
PerSys Medical

Categories: Medical Equipment • Drug delivery
Therapeutic Area(s): Emergency Medicine Services (EMS) • Intensive Care unit (ICU) • Pediatrics
• Wound Management

Life Saving Innovations

PerSys Medical Group is a global organization which manufactures, markets and distributes innovative lifesaving medical devices for Military, EMS’s, Law Enforcement, Disaster Preparedness, Search and Rescue, pre-hospital and in-hospital use.

Hemorrhage Control
The Emergency Bandage® has become an integral component of emergency hemorrhage control and wound treatment in pre-hospital situations. The bandage is easy to use, appears in several sizes, used by military and civilian arenas worldwide.

Vascular Access
The B.I.G. is simple, automatic, intraosseous devices which provide safe, quick and easy vascular access in emergency situations, when vascular access is needed for fluid and drug administration. It’s small, light, and easy to use, even in the most demanding situations. It is used by military and civilian healthcare systems worldwide.

Hypothermia Treatment
The Blizzard System® with Reflexcell® unique technology reduces the risk of Hypothermia and support Hypothermic patient treatment and increase survival in extreme conditions. Blizzard thermal protective products are lightweight, windproof and waterproof.

Airway Management
The Pocket BMV is the only collapsible BVM on the market. When packaged, the unit is incredibly compact, saving valuable space in emergency kits. When expanded, the Pocket BVM is a fully functional respirator made of the highest quality materials for flawless performance.
Laser Cutting and Finishing of Miniature Metal Components.

Resonetics, a medical device manufacturer specializing in laser cutting, micromachining, 3D printing and finishing of miniature metal components.

We focus on medical device manufacturing of implants and surgical tools used in minimally invasive surgery.

Resonetics provides a comprehensive manufacturing platform for medical device, bio-engineering and hi-tech companies seeking prototyping, small series or contract manufacturing services.
Precision. Our Expertise Is Your Advantage

Shekel Scales Ltd., established in 1976, is a worldwide leader in advanced metrological technologies (digital weighing). The Healthweigh® collection features innovative designs, developed and manufactured to high professional standards. Advanced movement compensation technology eliminates involuntary movement during the weighing process ensuring exact weighing information. Scales connect to EMR systems communicating weighing information to patient medical records.

Shekel Scales headquarters are in Israel. Shekel (Ningbo) Scales, a wholly owned subsidiary, established in 2011, serves as a production facility. The Healthweigh® line includes a wide range of digital healthcare and fitness scales for infants, adults at hospitals, homecare, rehabilitation and elderly care facilities, providing best price quality balance. Scales are OIML approved.

Healthweigh® Physician Scales provide a reliable weighing system for medical centers, clinics, hospitals, fitness centers and the home. An ultrasonic height and weight measurement device has also been developed for the Chinese market.

Healthweigh® Special Needs Scales respond to the demands of diverse medical sectors. They are user oriented, comfortable, easy to use and operate and most importantly - perfectly safe.

Healthweigh® Neonatal Scale is ergonomically designed for the newborn and growing baby. An all-in-one system for keeping track of a baby’s vital measurements (weight and length) from birth through early childhood was developed for China’s well-baby clinics.
Manufacturer of Sterilization and Infection Control Products

Made with over 90 years of experience:

Tuttnauer manufactures sterilization and infection control equipment for medical, industrial and laboratory use. Beyond our unmatched range of autoclave sterilizers and washer-disinfectors, we offer complete turnkey solutions, including planning, design and installation of equipment, as well as consultation and feasibility studies for projects of all sizes.

Tuttnauer’s sterilization and infection control solutions are trusted by hospitals, laboratories and clinics in more than 140 countries. We are driven by a passion for research and development, high quality manufacturing and workplace safety. Our goal is to remain at the forefront of innovation in each of these areas. This is how we keep our clients’ trust and stay ahead of the competition.

Tuttnauer works on large-scale joint projects with leading universities and research institutes to deliver tomorrow’s technologies. This close co-operation with the scientific world allows us to remain at the forefront of our field, developing cutting-edge methods and integrating them into our products.

With over 200 distributors worldwide, Tuttnauer has a presence on all five continents. Our far-reaching network of sales consultants and authorized service technicians enables us to offer a personalized, responsive service to all healthcare providers and laboratories all over the world.
Continuous Monitoring and Protection for Better Patient Care

VITALERTER is a unique and simple-to-operate cloud-based patient monitoring solution especially designed for the Elderly Care market.

Using artificial intelligence based on machine learning algorithms combined with sensitive motion sensors, it detects bed exits, inform 24/7 about the bed occupancy, measures continuously the Heart Rate, Respiratory Rate and analyses precisely body motions without touching the patient in bed. In case of adverse events, the system alerts automatically and vocally the nurses for an immediate intervention in the room.

VITALERTER is literally a virtual nursing assistant providing round-the-clock monitoring and lessen the burden on care and medical professionals.

Our system does not require any complex installation and can be operational within less than one hour. It uses standard WiFi and mobile devices, in order to communicate with our plate-form located in Microsoft Azure worldwide secured Cloud Infrastructure.

With a continuous monitoring of vital signs and body motion, our solution can

• detect vitals sign deterioration at early stage
• prevents falls and pressure ulcers
• reduce staff time on vital sign collection on general care units
• reduce length of stay and improve patient flow by rescuing deteriorating patients earlier
• improve quality of care and reduce mortality by identifying deteriorating patients earlier and much more...
